

Road 4 FAME

A Roadmap for Future Architectures and Services for Manufacturing

Carsten Rückriegel
Road4FAME-Final-Conference
Harderwijk, September, 22nd – 23rd 2015

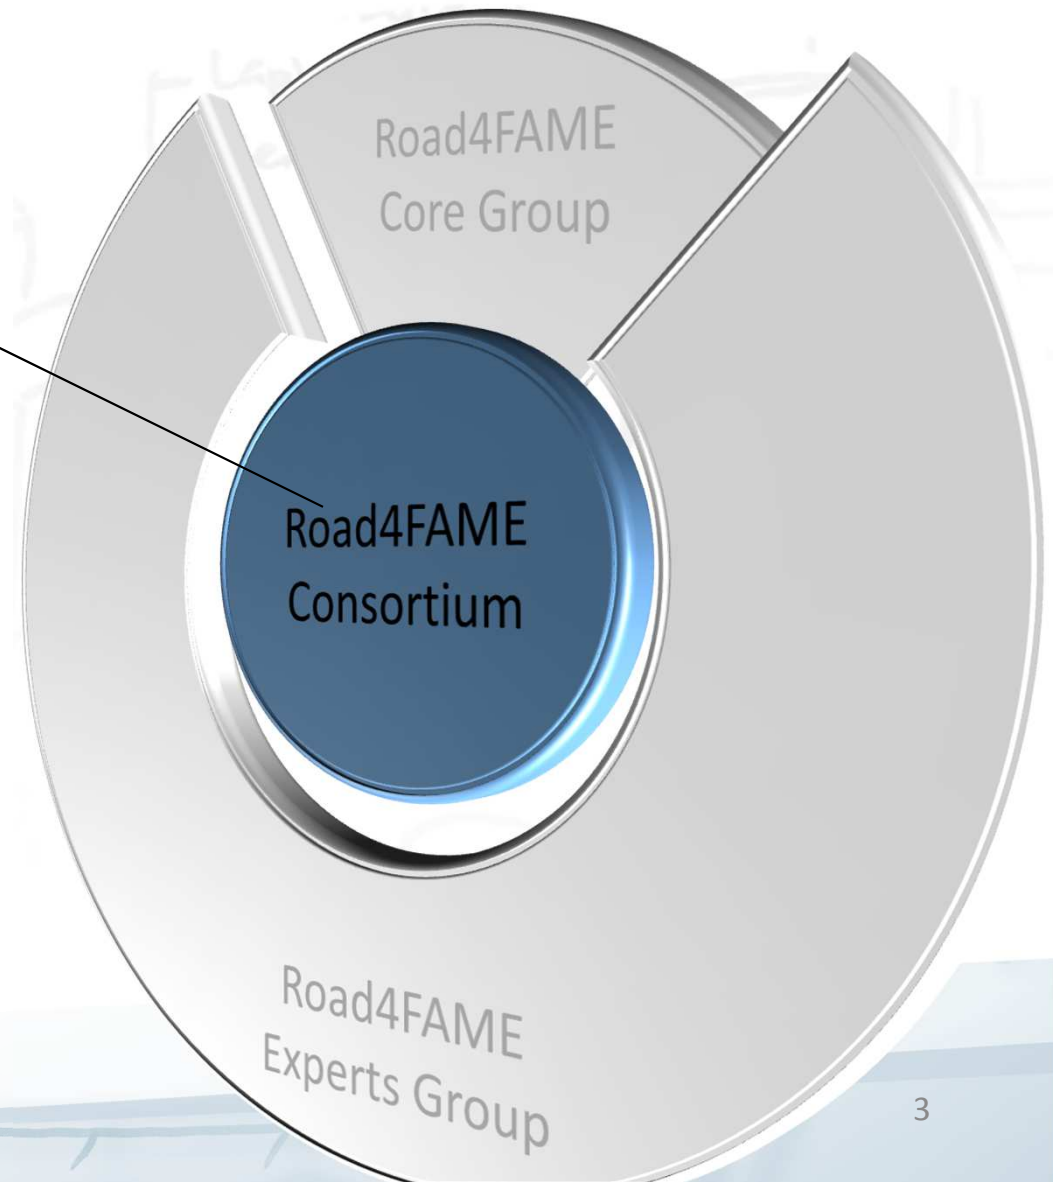

Road4FAME in a nutshell

- **Road4FAME** = Development of a Strategic Research and Innovation **Roadmap** for **Future Architectures** and Services for **Manufacturing** in **Europe**
- Coordination Action, co-financed under the Factories of the Future PPP, FP7-ICT: ICT for the Enterprise and Manufacturing
- Project duration:
June 2013 - Oct 2015, 29 months
- Total budget: EUR 1.216.272
- Total EC contribution: EUR 859.968
- GA No. 609167

Road4FAME in a nutshell

Principal players in manufacturing IT,
leading manufacturing research centers,
and strategy and roadmap developers

Trends, Drivers, Needs

Trends, drivers, needs

Megatrends

- Demographic change
- Climate change
- Urbanisation
- Globalisation...

(Mega) trends related to FoF, CPS & IoT

- Digitalisation of economy & connectivity
- Rise of the individual, personalisation
- Sustainability, green thinking (sharing global responsibility)
- Knowledge as a key enabler (global knowledge society)

Manufacturing-related trends

- Continuous drive for manufacturing **efficiency and quality** (requiring optimisation tools and decision support)
- Rapidly evolving and **pervasive ICT technologies** (digitisation, visualisation, virtualisation)
- Demand by customers for **individualized / highly configurable products**
- Increasing **hybrid cross-over products/embedded IT** and integrated services
- Increasing **complexity** of products, processes, and supply networks

Trends, drivers, needs

Manufacturing Business Needs

- Reduction of **costs**, start-up times, fast scale-up
- Increasing **flexibility** of production environments
- Identify/anticipate **changes in demand**
- Reduction of effort for **integration of new equipment & tools**
- **Traceability** – cradle to grave
- Monitoring, optimisation and **predictive maintenance**
- More **intuitive system interaction / mobile devices**

BUT: Digitalisation (especially in SMEs) is mainly driven by IT solution providers and less strongly demanded by manufacturing companies (potential underestimated)

Key Barriers and Showstoppers Road 4 FAME

- **Manufacturing IT landscape is a 'wild garden'.**
 - History of point solutions creating a heterogeneous manufacturing IT landscape
 - Difficult to support and add capabilities
- **Manufacturing IT technologies are out of reach**
 - Especially for SMEs, due to the very high implementation costs
 - Here future architectures could contribute to alleviating such issues, making manufacturing IT innovation more accessible
- **Security and privacy**
 - Number one show stopper

The background is a dark blue gradient filled with various futuristic and technological motifs. On the left, there is a large, detailed gear with a glowing yellow center. To its right, a network of glowing blue lines and nodes connects different points, resembling a data flow or circuit diagram. Several smaller gears are visible in the background, some partially obscured. On the right side, there are multiple sets of three blue arrows pointing to the right, suggesting forward movement or progress. The overall aesthetic is high-tech and digital.

Recommendations

Recommendations

- Seamless **integration** of systems and components
- **Interoperability**, standardisation, **reference architectures** and tools
- **Platforms** (organisational, technological, operational, customer,..)
- Acquisition and use of **big data in real time** & handling of complexity
- Visualisation, virtualisation, situational awareness, **decision support**
- Multidisciplinary **modelling** & simulation

Priorities for Manufacturing

- Machine Learning and Adaptive Systems to enable flexible and adaptive manufacturing
- **Scalable Cyber-Physical System architectures** for adaptive and smart manufacturing
- **Network-centric communication and collaboration** between players, humans and systems across the entire value chain
- **ICT platform** for advanced supply chain decision support
- Modelling of **virtual enterprises**

Cross-cutting Challenges

- Security, privacy, trust
- Regulatory issues, IP
- Demonstrations, living labs
- Business models
- De-fragmentation, cross-fertilisation
- Raise awareness
- Socio-technical issues
- Training and education
- Commitment of large industries
- Enhance involvement of SMEs
